Critical Research Areas Driven by Industry Transformations Panel DATE 2015

Axel Jantsch

Critical Research Areas Driven by Industry Transformations - Questions

- What are (should be) key/emerging industry drivers of research?
 - Products (applications)
 - Features
 - Functionality
 - Technology
- Where is the path forward most challenging/obscure?
- Which research breakthroughs have the most promise of high impact?
- Where may industry have unrealistic expectations?
- Which popular research is of less relevance in industry?

What are (should be) key/emerging industry drivers of research? **Applications**

■ Autonomous, Artificial Subjects

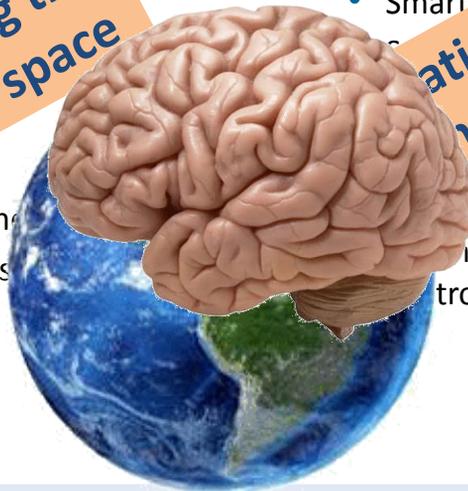

- Robots
- Drones
- Autonomous cars
- Aircrafts
- Vacuum cleaners
- Lawn mowers
-
-
-

Navigating the physical space

■ Distributed Sensing, Processing and Control

- Surveillance cameras
- Smart homes
- Smart grids
- Smart cities
- Smart monitoring
- Smart monitoring
- Smart monitoring and control
- Smart monitoring and control
- Smart monitoring and control

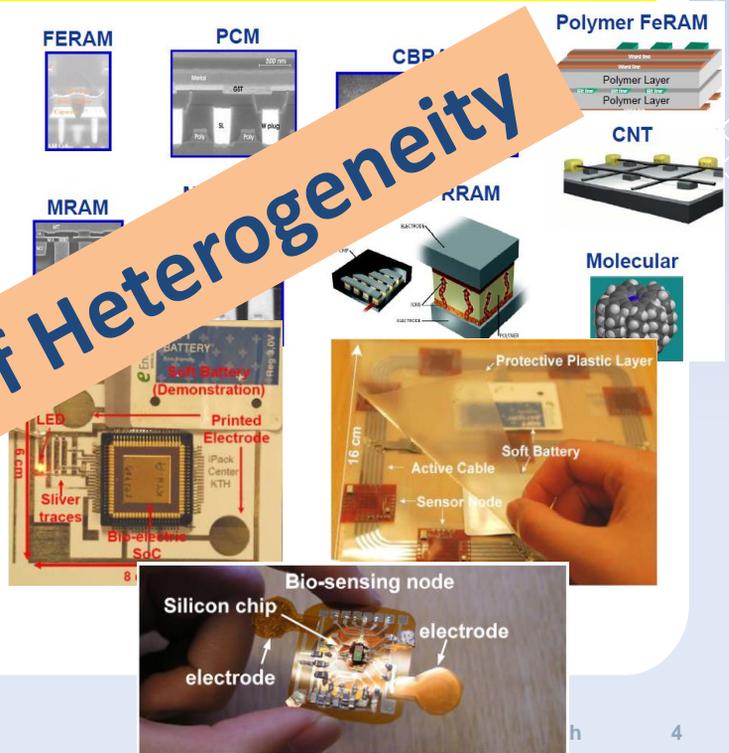

Navigating the information space

What are (should be) key/emerging industry drivers of research? **Technology**

- 3D Stacking
- 3D Transistors
- Phase Change RAM
- Spin Torque Transfer RAM
- Memristors
- Hybrid Memory Architectures
- Carbon Nano
- Graphene
- Organiy Electronics
- Functional Materials

Era of Heterogeneity

Which research breakthroughs have the most promise of high impact?

- Future Breakthroughs are unknown
- Composability of Subsystems
(Functions, Performance, Correctness, Cost)
- Efficient on-line Learning and Adaptivity

Where is the path forward most challenging / obscure?

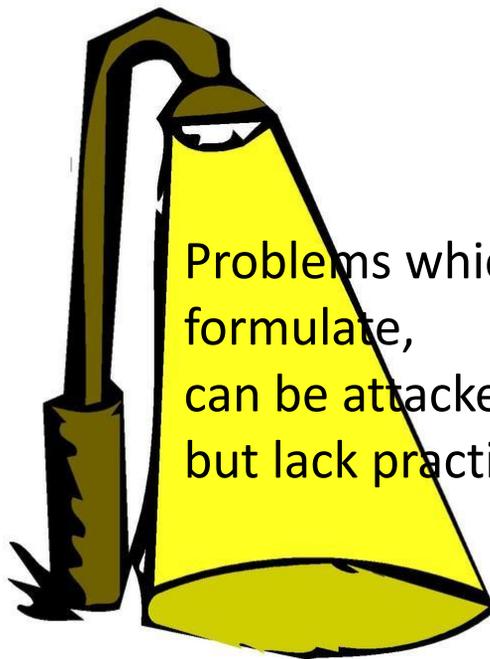

- Pure top-down design (Specification -> Synthesis -> Product) is elusive
- Dynamic learning and adaptivity
- Interaction with users / integration with humans
- Where certification and legal issues dominate
- What do users expect and accept
- Interplay and integration of different domains and ecosystems

Where may industry have unrealistic expectations?

- Where it cannot formulate the problem
- Methodologies and design flows will not be revolutionized by academic research

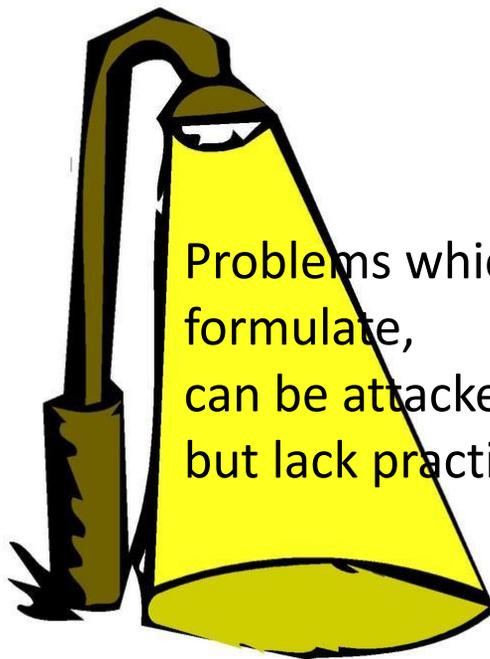

Which popular research is of less relevance in industry?

Problems which are easy to formulate,
can be attacked by small groups,
but lack practical relevance

Which popular research is of less relevance in industry?

Problems which are easy to formulate,
can be attacked by small groups,
but lack practical relevance
